SUBJECT INDEX

Actinide oxides 134
Adsorbate vibrational damping 77
Alkali-metals, insertion compounds 135
Alkaline-earths, insertion compounds 135
Amphiphilic pyrrole derivatives, electrochemical polymerization in Langmuir–Blodgett multilayers of 11
Angle-resolved photoemission (ARP) 49
  adsorbate vibrational damping 77
  cross-section variations 118
  experimental apparatus 59
  future prospects 117
  GaAs 74
  heavy Fermion materials 111
  high T_c superconducting oxides 113
  in correlated systems 100
  in highly correlated materials 105
  insulating transition metal monoxides 108
  layered structures 96
  Ni(001) 102
  noble metals 66
  phenomenology 50
  photon source 60
  platinum 69
  simple metals 63
  spatial resolution 118
  spectral intensities 56
  spectrometers 59
  surface and bulk electronic structure 65
  surface dynamics and structure 77
  surface reconstruction in metals 80
  transition metal oxide 106
  ultrahigh energy and momentum resolution 120
Anodic doping 24
Anodic formation of polymers at room temperature in ionic liquids 8
Anodic polymerization of organic conducting polymers 4

Band structure and extrinsic reconstructions 94
Battery technology, electrode material 36
Beeman models 224
Brillouin zone 52, 55, 56, 63, 64, 85, 237

Carbon
  properties of various forms of 202
  see also Hard amorphous (diamond-like) carbons
Cathodic synthesis of organic conducting polymers 7
CDW model 85, 86
Charge transfer mechanism in polymeric material 27
Chemical functionalization of organic conducting polymers 12
Chemical vapour deposition (CVD) 306
Chronocoulometry in polymerization process 21
Composite polymers 11
Continuous random network (CRN) 224
Copolymerization of organic conducting polymers 12
Cyclic voltammetry for electrochemical behaviour of polymers 23
Cylindrical mirror analyser (CMA) 61

Diamond-like carbons. *See* Hard amorphous (diamond-like) carbons
Diffusion-limited polymerization 10

Electroactivity of monomers 13
Electrocatalysis
  by immobilization of redox metallic cores 42
  highly dispersed metal microparticles in polymers 43
  of organic conducting polymers 39
Electrochemical doping 24
Electrochemical polymerization
  conducting polymers obtained by 3
  Langmuir–Blodgett multilayers of amphiphilic pyrrole derivatives 11
Electrochemistry
  and polymer materials 32
  transformation of organic chemicals 1
Electrochromism 32
Electrode modifiers 38
Electron energy loss spectroscopy (EELS) 216, 223, 233
  hard amorphous (diamond-like) carbons 271
Electron–phonon (or non-adiabatic) effects 86
Electronic conducting polymers 11
Electronic damping mechanisms 77
Electronic structure
  and elementary excitations 77
  bulk and surface 62
  hard amorphous (diamond-like) carbons 249, 260
  in simple materials 62
  nickel 102
  noble metals 66
  polarization effects on 58
  residual atomic or molecular effects on 59
  solids 49
  surface and bulk 54
  symmetry effects on 58
  transition metals 100
Ellipsoidal mirror display analyser (EMDA) 62
Extended X-ray absorption fine structure (EXAFS) 216, 228

Fe_3O_4, crystallographic information 151
Fermi surface 81–5, 88, 89, 90
  and extrinsic reconstructions 93
  Mo(001) 88
  Mo(011) 88
  Pd(001) 88
  Pt(111) 88
  W(011) 88

GaAs
  angle-resolved photoemission (ARP) 74
  electronic structure 74
Gas phase photoelectron spectroscopy 59

Hard amorphous (diamond-like) carbons 199
  atomic structure 204, 213

background 201
band gap 254
band structures 250
C–H vibrational modes 247
constraint model 314
coordination 249
defect densities 299
defect equilibria 304
density of states (DOS) 250, 259, 262
deposition mechanisms 306
deposition methods 205
doping 295
elastic moduli — comparison with experiment 316
electrical conductivity 293
electron energy loss spectra 271
electronic structure 204, 249, 260
friction properties 321
hardness 317
Huckel calculations 250
hybridizations 201
infrared (IR) spectra 236
internal stress 322
ion beam deposition 205, 311
ion–solid interactions 310
laser deposition methods 213
localization 290
localized states 288
luminescence 303
mechanical properties 313
optical excitation 303
optical spectra 268
photoemission spectroscopy 263
physical properties 201
plasma deposition 209
a–C:H 306
a–Si:H 306
properties of a–C 283
properties of a–C:H 275
Raman spectra 236
real space studies 230
role of hydrogen 279
σ–π mixing 258
sputtering methods 208
structural characterization methods 215
structural modelling of a–C 224
structure of a–C 218
structure of a–C:H 228
structure of MSIB a–C 222
Heavy Fermion materials 111

Infrared (IR) spectra, hard amorphous (diamond-like) carbons 236
Insertion compounds
δ–UO_3 148
alkali-metal 135
alkali-metal salts 139
alkaline-earth 135
chemical reagents 137
deintercalation 143
electrochemical preparations 140
features of 134
hexagonal framework hosts 158
hosts 144, 145
ion-exchange reactions 142
layered hosts 165
miscellaneous framework structures 161
miscellaneous layered hosts 167
MoO_3 structure 166
organometallic reagents 138
pillared layer hosts 153
ReO_3 structure type hosts 145
ReO_3-related intercalates 146
rutile-related hosts 160
spinel-type hosts 150
structural aspects 144
thermodynamic data 168
transition-metal and uranium oxides 133
V_2O_5 structure 165
Insertion process 134
Insulating transition metal monoxides 108
Intercalation compounds 134
Ion beam deposition 205, 311
Ion-exchange reactions 142
Ionically conducting polymers 11

Kohn anomaly 90

Langmuir–Blodgett multilayers of amphiphilic pyrrole derivatives, electrochemical polymerization in 11
Laser deposition methods 213
Layered compounds, structural instabilities 96
Local density approximation (LDA) 63, 65
Low energy electron diffraction (LEED) 53, 81, 85

Magic angle spinning (MAS) 216
Mass selected ion beam deposition (MSIB) 222
Medium-range ordering (MRO) 214, 250
Metal surfaces, adsorbate induced reconstructions 92
Molybdenum(001)
non-adiabaticity and inherent instability 87
non-adiabaticity and local bonding 87
reconstructions 81, 88
Molybdenum(011), Fermi surface 88
Monomers, electroactivity of 13
Mott–Hubbard insulators 109
Multilayer deposit in vacuum system 10
Multilayer polymers 11

Narrow band compounds 104
Nickel, electronic structure 102
NMR 216, 219
Noble metals, angle-resolved photoemission (ARP) 66

Optically active polymers 38
Organic conducting polymers 1
anodic polymerization of 4
as electronic devices 34
cathodic synthesis of 7
electrochemical synthesis 4
structure-conductivity relationship 29
technique for studying 21

Pd(001), Fermi surface 88
Photocorrosion, protection against 34
Photoelectrochemical polymerization 10
Photoemission spectroscopy
electronic structure of solids 49

hard amorphous (diamond-like) carbons 263
Physical vapour deposition (PVD) 306
Plasma deposition 209
a–C:H 308
a–Si:H 306
Platinum
angle-resolved photoemission (ARP) 69
electronic structure 69
Platinum(111), Fermi surface 88
p–n junctions 34
Polarization effects on electronic structure 58
Polydibenzocrown ethers 30
Polymerization in presence of soluble polymer 11
Polymerization potential for conducting electropolymerization 16
Polymerization process, chronocoulometry in 21
Pulsed current method for charge-transport rates 28

Quasi-monochromatic photons 59
Quasi-particle dispersion relations 52

Radial distribution function (RDF) 217, 219, 220, 222–4, 226, 227
Raman spectra, hard amorphous (diamond-like) carbons 236
Redox polymers 40
Redox process 134
Residual atomic or molecular effects on electronic structure 59

Satellite emission 100
Scanning transmission electron microscopy (STEM) 230
Scanning tunneling microscopy (STM) 230
Selective membranes, organic conducting polymers 43
Short-range order (SRO) 250
Solids, electronic structure of 49
Spherical deflection analyser (SDA) 61
Sputtering methods 208
Structure factor derived intensity variations 57
Superconducting oxides, high T_c 113
Surface reconstruction in metals 80
Symmetry effects on electronic structure 58

Tetrathiafulvalene (TTF), oxidation of 1
TiO_2 semiconductor electrode 10
Ti_2O_3, angle-resolved photoemission (ARP) 106
Toroidal grating monochromator (TGM) 60
Transistors, organic conducting polymers 36
Transition metal oxides
angle-resolved photoemission (ARP) 106
insertion compounds 133
Transition metals, electronic structure 100
Transmission electron microscopy (TEM) 230
TRIM code 311

δ–UO_3, insertion process 148
Uranium oxides, insertion compounds 133
UV-visible spectroelectrochemical study of films set on solid surfaces 26

Veratrole, oxidative trimerization-electrocrystallization 1

W(001)
non-adiabaticity and inherent instability 87
non-adiabaticity and local bonding 87
reconstructions 81, 88
W(011), Fermi surface 88

XANES 216, 219
